

— AN AI STUDIO — PRODUCTION-GRADE SYSTEMS, BUILT WITH CARE

The AI layer for *serious* businesses.

We are a focused AI studio. We build production AI systems — voice agents, vision models, anomaly monitors, branded chatbots, generative content engines — that quietly run the day-to-day of an ambitious company. Every system is *built, deployed and maintained* for you: productionised, monitored, and woven into the tools you already use.

/ i. Six workshops, one *AI* studio.

01

Voice *Agents*.

A 24/7 phone agent in your brand voice — natural inbound & outbound calling, booking, lead qualification, live call summaries written to your CRM.

STACK TRACE:
ELEVENLABS, VAPI, TWILIO, OPENAI
REALTIME

02

AI *Chatbots*.

A trained-on-your-business assistant on web, WhatsApp, Slack and Teams. RAG over your docs and tickets; action-taking with human escalation.

STACK TRACE:
CLAUDE, GPT-4O, LANGGRAPH, PINECONE

03

Computer *Vision*.

Eyes for your business — object & defect detection, OCR and document parsing, people counting and shelf compliance. On-device or cloud.

STACK TRACE:
YOLO, ROBOFLOW, GPT-4 VISION, AWS
RECOGNITION

04

Anomaly *Detection*.

Always-on AI watching feeds — safety violations, in-line defects before shipping, perimeter breaches and unusual activity.

STACK TRACE:
YOLOV8, ROBOFLOW, CUSTOM MODELS

05

Generative *Video*.

AI marketing video, image and copy — social and ad videos from a written brief, avatar & spokesperson video in any language, A/B-ready variants.

STACK TRACE:
SORA, VEO, RUNWAY, HEYGEN

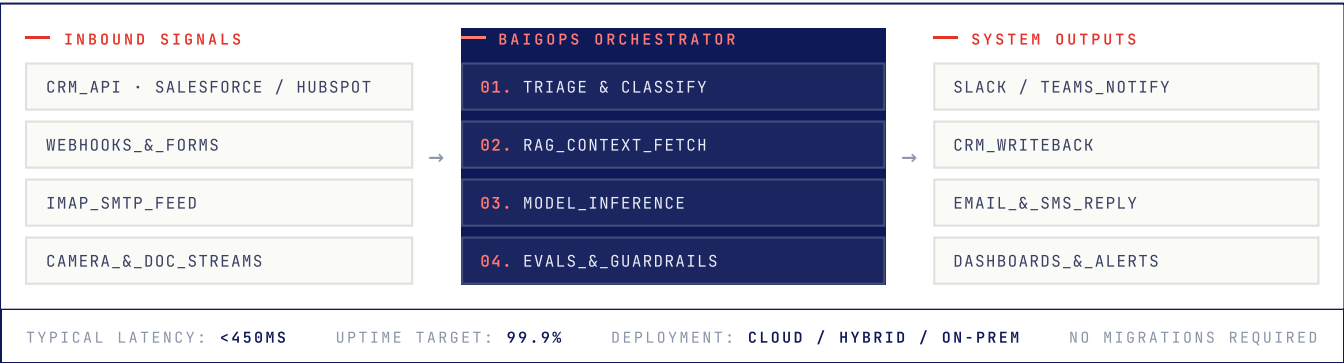

06

Tailored *Systems*.

When the shape of the problem is yours alone — multi-agent workflows orchestrating ops, custom fine-tunes, internal copilots in your tools.

STACK TRACE:
YOUR STACK — WE MEET YOU WHERE YOU LIVE

/ ii. Quietly *wired* together.

/ iii. A short, *unhurried* arc.

From first call to a production system, typically four to twelve weeks.

We do not believe in eighteen-month transformation programmes.

WEEK 1

We *scope*.

A strategy call with a principal engineer. We map the system, surface the risks, agree success metrics — and quote it in writing within a week.

WEEK 2

We *design*.

Architecture, data flow, model choices, evals, guardrails. A short, written design doc you can interrogate before any code is written.

WEEKS 3-12

We *build & ship*.

Production-grade engineering from day one. Versioned releases, real metrics, weekly demos — the system grows in your own environment.

ONWARD

We *tend*.

Monitoring, evals, retraining, second-generation builds. The system gets sharper every month, with a senior team standing behind it.

/ iv. Senior engineering, *priced clearly*.

i. — low friction

Discovery

Two-week sprint. Architecture, risks, success metrics — documented, deliverable, and yours to keep whether you build with us or not.

ii. — fixed scope

Build

Fixed-scope engagement. Production AI system shipped in 4-12 weeks, with evals & comprehensive handover.

iii. — evolutionary

Partnership

Monthly retainer. Ongoing evolution, monitoring, evals and second-generation builds. For systems that grow.

Every project starts with a written scope, a fixed-fee commercial, and the same senior team from first call to production. No subcontractors, no surprise invoices, no junior hands on the keyboard.

/ v. Every deployment *includes*.

- Monitoring & automated evals in production
- Guardrails, refusal rules and tone tuned to your brand
- Weekly demos and versioned releases during the build
- A written design doc before any code is written
- Integration into your existing CRM and tools — no rip-and-replace
- Senior oversight and a named principal engineer

/ vi. Our *manifesto*.

AI for business shouldn't feel like a *spaceship*. It should feel like a good cabinet — *well-joined*, quietly opening drawers exactly when you reach for them.

Tell us the AI system you wish you already *shipped*.
